7. Temperature Conditions

Storage Temperature Range	Operation Temperature Range
-40°C ~ +75°C	-20°C ~ +60°C

8. Terminal Mechanical Strength

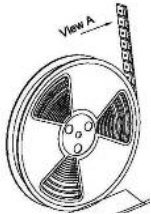

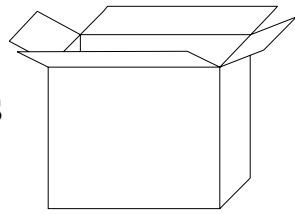

Terminal mechanical strength to be no interference in operation after pulled the terminal with 1kg strength for 1 minute.

<p>9.</p>	<p>Reliability Test</p> <p>After any following tests, the sensitivity of the microphone to be within $\pm 3\text{dB}$ of initial sensitivity after 3 hours of conditioning at 20°C.</p> <p>9-1 Vibration</p> <p style="margin-left: 40px;">Frequency1 : 10Hz~55Hz Amplitude : 1.52mm Change of Frequency : 1 octave/min 2 hours in each of 3 axes</p> <p>9-2 High Temperature Test</p> <p style="margin-left: 40px;">$+70^{\circ}\text{C}$ for 72 hours.</p> <p>9-3 Low Temperature Test</p> <p style="margin-left: 40px;">-20°C for 72 hours.</p> <p>9-4 Humidity Test</p> <p style="margin-left: 40px;">$90\% \sim 95\% \text{RH}, +40^{\circ}\text{C}$ for 240 hours</p> <p>9-5 Temperature Cycles</p> <p style="margin-left: 40px;">-20°C \longleftrightarrow 25°C \longleftrightarrow 70°C \longleftrightarrow -20°C (2h) (1h) (2h) (1h) (2h) (2h) x 10 cycles</p> <p>9-6 Packing Drop Test</p> <p style="margin-left: 40px;">Height : 1m Procedure: 5 times from each of 3 axes</p>
<p>10.</p>	<p>Recommend assembly weld plate</p> 
<p>11.</p>	<p>Reflow Process Condition</p> <p>The soldering profile depends on various parameters necessitating a set up for each application. The data here is given only for guidance on solder re-flow. There are four zones:</p> <ol style="list-style-type: none"> 1. Preheat Zone: This zone brings the temperature at a controlled rate, typically $1 \sim 2.5^{\circ}\text{C}/\text{s}$. 2. Equilibrium Zone: This zone brings the board to be a uniform temperature and also activates the flux. The duration in this zone (typically 2~3 minutes) will need to be adjusted to optimize the out gassing of the flux. 3. Re-flow Zone: The peak temperature should be high enough to achieve good wetting but not so high as to cause component discoloration or damage (255°C for maximum 10 seconds). Excessive soldering time can lead to inter-metallic growth which can result in a brittle joint. 4. Cooling Zone: The cooling rate should be fast, to keep the solder grains small which will give a longer

lasting joint. Typically will be 2~5°C/s.

5. Sensitivity change should within ±3dB after re-flow process and at room temperature for 30 minutes at least.
